*As Dean of Engineering,  
it is my pleasure and privilege  
to welcome you to our 2023  
Final Year Research Project  
Display Day.*

The Part IV Research Project represents a significant point in an undergraduate Engineering student's degree. These year-long research undertakings are the culmination of the knowledge they've attained so far, applied to relevant situations that they have to test and prototype, many of which you will be able to witness today. The Research Project Display Day is always an exciting time to see engineering theory come to life.

These projects provide an opportunity not just for students to realise their capacity and build confidence in their skills, but also for employers to experience what an up-and-coming engineer can bring to the table. We put a strong emphasis on getting our students career-ready once they graduate, so it's great to see the range of industry sponsors who continue to get involved with the final year research projects each year.

I hope you'll join us in proudly celebrating everything that our students have achieved this year.

# ABOUT

## *the Final Year Project*

The Final Year Project, formally recognised as the Part IV Research Project, is a compulsory unit of our Bachelor of Engineering (Honours) degree. This involves final year Engineering students spending the bulk of the year — usually in pairs — on a research project supervised by engineering academics. This degree component requires the submission of a research portfolio that includes a final report, a conference presentation, and technical demonstrations. In essence, it assesses a student's ability to utilise their knowledge of both theory and practice.

A variety of topics will be showcased by each department, and in some cases, a student's project may entail solving a real problem proposed by an engineering company. Because these projects are considered as learning experiences to encourage students to tackle problems the same way engineers do in their professional career, we encourage as much industry participation as possible.

We ensure that this is the case by inviting industry professionals each year, not just as sponsors and co-supervisors, but also to review and judge the projects. Prizes are also awarded to outstanding projects of each department.

The practical demo and display/exhibition component of the Final Year Project is what you will be seeing today.

### **Engineering departments featured at today's event in the order of floor level:**
